

Site Security & Access Control Policy

Ever Stone Building Contracting LLC

Ensuring the security of construction sites, equipment, materials, and personnel is fundamental to Ever Stone Building Contracting LLC's operational integrity. This policy establishes protocols for site access, monitoring, and protection against theft, vandalism, and unauthorized entry.

Access to sites is restricted to authorized personnel, visitors, and vehicles through identification badges, sign-in procedures, and controlled entry points. Security personnel or electronic surveillance systems monitor sites 24/7 where necessary.

Visitors must be registered, accompanied by designated staff, and briefed on site safety and security rules. Contractors and subcontractors are required to follow all site access policies and report any suspicious activity immediately.

Materials and equipment are stored securely, with inventory controls and locking mechanisms in place. Regular site inspections verify the effectiveness of security measures.

In case of security breaches or theft, prompt reporting to site management and local authorities is mandatory. Investigations are conducted, and corrective actions implemented to strengthen security controls.

Training for all employees and subcontractors includes site security awareness and responsibilities. The policy is reviewed periodically to incorporate new technologies or regulatory changes.

Maintaining secure construction sites protects investments, ensures smooth project progress, and safeguards the safety and wellbeing of all involved.
